

B1545-L11

Description:

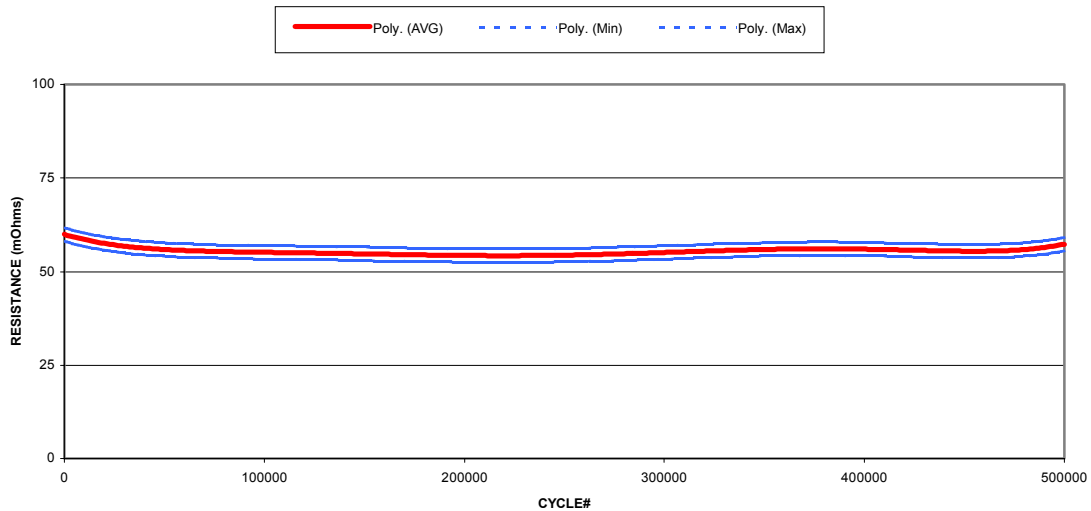

Analyze resistance of 50 sample probes under a cycle life totaling 500,000 cycles employing a “4-wire” Kelvin test set-up.

Tested under the following conditions:

Cycle Life- 500,000 Cycles
Test Date- July- 2000
Tester- Wade
Machine- Cycle Tester #2

50 Sample Probes: (m Ohms)

B1545-L11 - 500,000 CYCLES AVERAGE RESISTANCE

Summary:

- Under a cycle program totaling 500,000 life cycles, the 50 sample probes have an average resistance of 55.47 m Ohms throughout entire 500,000 life cycles.
