

B1861-A1

Description:

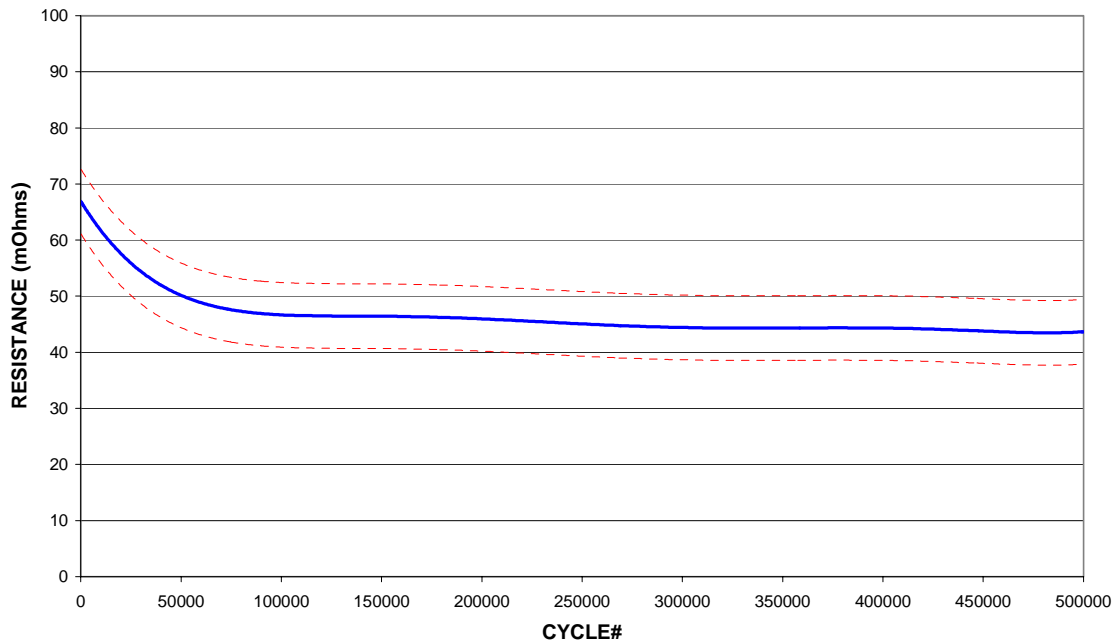

Analyzed resistance of 10 sample probes under a cycle life totaling 500,000 cycles employing a “4-wire” Kelvin test set-up.

Tested under the following conditions:

Cycle Life- 500,000 Cycles
Test Date-
Tester- YOSIMURA
Equipment- RDK Tester

10- Sample Probes: (mOhms)

B1861-A1 TEST - 500,000 CYCLES AVERAGE RESISTANCE

Summary:

- Under a cycle program totaling 500,000 life cycles, the 10 sample probes have an average resistance of 46.77 mOhms throughout entire 500,000 life cycles. Resistance will slowly increase as cycle life increases
